NEWS RELEASE

CONNEXION TECHNOLOGIES SIGNS MULTIPLE PROPERTY DEAL WITH GINN CLUBS & RESORTS

Connexion will build fiber optic networks in Ginn properties across the United States and the Caribbean

Cary, North Carolina (October 24, 2006) – Connexion Technologies announced today a multiple property partnership with Ginn Clubs & Resorts, a privately-held resort development and management firm specializing in exclusive leisure lifestyle and vacation destination communities across the United States and the Caribbean.

“By partnering with Connexion, our residents will experience a whole new level in entertainment and communication services,” said Al Jones, President of Ginn Lifestyles Group, a division of Ginn Clubs & Resorts.

Connexion, a leader in the fiber optic broadband industry, will deploy their fiber networks to Ginn properties in North Carolina, South Carolina, Florida, Colorado, as well as Grand Bahama Island and St. Thomas, U.S.V.I. Residents and vacationers will receive their telephone, internet, television and security services bundled over a single fiber network. By bundling these services through local and national providers, Connexion is able to save residents and owners money over using traditional service providers.

Glen Lang, Connexion Technologies CEO, stated: “We’re excited and looking forward to working with The Ginn Company in providing residents and guests with our state-of-the-art fiber network.”

Connexion will also offer technology concierge services, wire maintenance programs and several other additional services at select Ginn developments. Services will vary by property.

Keeping up with the demands of today’s technology users has been an ongoing challenge for traditional providers utilizing copper/coaxial cable networks. Fiber provides almost unlimited bandwidth for the delivery of multiple services over a single network. These include voice, video, data and security services; plus, there is bandwidth left to support additional services which may include IPTV, Video on Demand, gaming, medical monitoring and more.

The high cost of creating a fiber optic infrastructure had previously limited the number of pre-wired communities nationwide, but recent research shows a rapid increase in the past four years. According to a study by the Fiber to the Home Council, the number of wired homes under development has increased 100-fold in the past four years, from 35,000 homes in 2002 to more than 4 million homes this year.
