

PRESS RELEASE

CONNEXION TECHNOLOGIES AND GUEST-TEK PARTNER TO DEPLOY FIBER IN ORLANDO DEVELOPMENT

Fiber-optic amenity will be available in 1377 units in Westside DRI Development

Cary, NC (December 4, 2006) – Guest-Tek Interactive Entertainment Ltd., (“Guest-Tek”) (TSX: GTK), a leader in providing broadband technology solutions to the global hospitality industry, today announced it has completed a partnership agreement to provide OneView triple-play systems through Connexion Technologies (“Connexion”). Under the terms of the Agreement, Connexion will fund the installation of Guest-Tek equipment at Westside DRI. Guest-Tek will provide the OneView and other services to customers, and the partners will share in the recurring revenue.

Westside DRI, located in Orlando, Florida, is a multi-phase development which will feature a fiber distribution network enabling the delivery of video and television channels, IP video-on-demand (“IPVOD”) in High Definition (“HD”), high-speed Internet access (“HSIA”), and telephone services. The 1377 units in the four initial phases will be installed and turned on with the bundled service package as the units are made available.

“The growth potential in this new market is significant as more developments look for fiber connectivity and a full suite of flexible IP services,” said Arnon Levy, Guest-Tek President and CEO.

“Connexion is pleased to have added strength to our service offering with the world’s leading IP triple play provider to hospitality,” said Glen Lang, CEO of Connexion. “The size and scale of Guest-Tek’s customer base and their reputation and experience in the hospitality industry ensures our customers and end-users will receive a superior level of service and support.”

The partnership will result in developers having access to a new level of turn-key technology, with the following state-of-the art features:

- Highest level of technology via a fiber-optic infrastructure
- Virtually unlimited bandwidth for standard and premium video, telephone, and high speed Internet applications
- Fiber technology is “future-ready” and has capacity for emerging technologies
- Customized content (program or channel)
- Pure IP framework for simplicity and flexibility in service delivery and integration with property management systems

- cont. -

This partnership's business model benefits the entire value chain in new resort developments:

- Developers face no capital cost
- Developers generate revenue through door fees or recurring revenue sharing
- Developers can extend the capital model to electronics and other amenities
- Faster sell-through and increased property values
- Home Owners Associations/Condo Associations receive an improved service package with a single bundle and upgradeable network infrastructure
- Unit owners see better pricing and simplified billing for the full IP triple play, as well as increased property values and the ability to add services in the future

“We were looking for a technology platform that would meet our customers' expectations without forcing us to become an IT shop to integrate all of the different service components and keep them running. The simplicity of the business model offered by Connexion allows us to increase the value of the development without derailing our budget,” said Bob Marks of Maesbury Homes, developer of Westside DRI.

About Connexion Technologies

Connexion Technologies, the country's premier fiber-optic amenity company, builds and operates state-of-the-art entertainment and communication networks in single family, multi family, high rise, resort and hospitality properties from coast to coast. Their award-winning, blazing fast, Fiber to the Home (FTTH) and Fiber to the Premise (FTTP) networks have virtually unlimited bandwidth and are “future-ready” to handle emerging technologies as they come to market. Connexion Technologies aligns with leading service providers, who supply their networks the best in television, voice, Internet, and security monitoring services. They also offer properties a suite of comprehensive entertainment and communication technology solutions. From Video-on-Demand (VoD), unit monitoring and management, remote energy control, customized television channel content, to many more features and services, Connexion Technologies creates *A Better Connection*SM with their one-source technology solution. The company (formally known as Capitol Infrastructure), based in Cary, North Carolina, was established in 2002 and has various office locations around the country.
