## **Cottages on the Greene Becomes Certified Member of the Fiber-Optic Revolution**

Cary, North Carolina (March 25, 2008) – Cottages on the Greene recently joined an elite group of technologically-advanced communities when they became a Certified Fiber-Optic Development. Residents of Cottages on the Greene can now rest assured that the fiber-optic network in their community can support their technology needs today, as well as into the future. Wayne Musgrove, Cottages on the Greene’s developer, used the fiber-optic amenity company, Connexion Technologies, to build its state-of-the-art network.

Connexion Technologies designs, installs and operates fiber-optic networks for developers coast-to-coast, using its own capital rather than that of the developers. Because fiber has unlimited bandwidth, entertainment and communications services can be delivered at the speed of light. The networks are also ready to accommodate emerging technologies, meeting not only the current needs of residents but also their future needs as well.

“I think that the fiber makes our homes much ‘smarter’ than homes with CAT-5 networks,” said Musgrove. “Perfect television reception, one-click Internet access with speeds noticeably faster than DSL or cable, and no service interruptions from storms are some of our most valued features.”

Certified Fiber-Optic Developments provide a vast array of benefits for both developers and residents. This certification makes communities more valuable and differentiates them from others in the area. It is also a great marketing tool as it alerts buyers to the fact they are getting more for their housing dollars within these unique and valuable communities. Connexion Technologies certification allows developers to give their properties a technological edge over competitors who do not offer a true, Fiber to the Home (FTTH) connection directly to each residence. For buyers, certification means a faster, better connection to their technology needs. It means customer satisfaction, countless service options and endless possibilities.

“We take care of our customers. We’re there every step of the way,” said Glen Lang, founder of Connexion Technologies. “After we design, install, operate and maintain the fiber-optic networks, we help market the communities as Certified Fiber-Optic Developments. It’s a win-win situation for everybody.”
