## **The Met Enhances Technology Offering with Fiber Optics**

*New development partners with industry leader Connexion Technologies.*

Cary, North Carolina (July 1, 2008) – The Met, a multi-use development located in Chandler, Arizona, will soon bring its residents the most advanced entertainment and communications services available in the area. This is possible through a partnership with Connexion Technologies, one of the nation's premier fiber-optic amenity companies. Connexion will build a Fiber to the Home (FTTH) network throughout the community.

A fiber-optic network can accommodate future needs through its unlimited bandwidth, one of the many benefits of this emerging technology. Fiber is more reliable than coaxial cable because it does not conduct electricity, resulting in fewer outages and greater resident satisfaction.

“There’s a revolution occurring with fiber-optic technology and it’s contagious,” said Glen Lang, founder of Connexion Technologies. “Home buyers are starting to demand it. It’s no longer a question of if, but when fiber will be in most communities across the U.S.”

The Met’s network will support a vast array of services including ultra-high speed Internet connections, more than 200 digital channels of entertainment and even Techierge™, a Simplikate solution that enables concierge services at the touch of a button. Also, all of the Met’s homes will come equipped with high-tech devices from Circuit City.

“What really sets us apart is our ability to deliver ultra-high speed – up to 25 megabits per second – Fiber to the Home Internet to every owner’s suite – Cox and Qwest can’t touch it,” said Met Project Director, Steve Earnhart. “Meeting the demand for a high-speed connection is critical, especially considering the technology demands of our residents employed by the nearby Silicon Desert companies.”
