

FOR IMMEDIATE RELEASE

Connexion Technologies Expands Business to Include Existing Properties

Cary, North Carolina (July 30, 2008) – Connexion Technologies, the nation's leading builder of fiber-optic infrastructure for greenfield real estate developments, recently began an initiative to expand its business. In addition to creating advanced fiber-optic networks in new developments, Connexion is now bringing the power, speed and flexibility of Fiber to the Home (FTTH) to existing properties.

Connexion will continue to invest its own capital to design, deploy, operate and maintain these networks, partnering with only best in class service providers, to deliver lifestyle-enhancing services such as telephone, television, Internet and security to customers.

Fiber to the Home networks can support far more bandwidth-hungry services than the traditional networks that currently exist in most properties. Connexion Technologies can deliver a more robust channel line-up, more HD channels, faster Internet speeds and more advanced phone packages and features – all at a higher level of service and at a lower price than most incumbents.

By installing a fiber-optic network in a development, Connexion can create networks that support advanced communications and entertainment services as they come to market, without the need to replace existing wiring.

Connexion recently established its first deployment of a Fiber to the Home network in an existing high-end golf community with 6,500 planned units, Ginn's Reunion Resort. According to Reunion management, the network's installation was so streamlined that it went almost completely unnoticed. After the first stage of the installation, Reunion even called Connexion to find out when it would begin construction, only to learn that much of the network had already been installed.

-MORE-

"The trick to overbuilding is not disrupting what is already there...not disturbing the daily lives of the residents," said David Burman, Regional Vice President of Reunion's developer, Ginn Resorts. "To date they have completed 65 percent of the overbuilding process without disrupting a thing." Thanks to their new FTTH network, Reunion can now support advanced technological services for its guests and staff.

Connexion is currently building FTTH networks in five properties, including resort, single family, high rise, and apartments, with dozens more already on the drawing board nationwide. "Connexion Technologies is very excited that we're able to bring all the benefits of an FTTH network into existing properties," said Geoff Fair, Connexion Technologies' Executive Vice-President of Engineering. "It's a very significant advance in our deployment of optical fiber that we've 'cracked the code' in figuring out how to make business sense of building networks in pre-existing communities. We hope that many more properties discover its advantages and upgrade to FTTH."

About Connexion Technologies

Connexion Technologies is the country's premier fiber-optic amenity company. It invests its capital to design, build and operate Fiber to the Home (FTTH) networks in single family, multi family, high rise, resort and hospitality properties nationwide. Its award-winning, state-of-the-art networks deliver an unsurpassed technology experience and enable developers to sell units at a faster velocity. By aligning its partners with leading service providers, Connexion Technologies offers the best in enhanced television, telephone, Internet, and security monitoring services. By offering a complete suite of entertainment and communication applications at the speed of light, Connexion Technologies creates *A Better Connection*SM with its one-source technology solution. The company is based in Cary, North Carolina. It was established in 2002 and is located in 17 offices throughout the country. For more information, visit www.connexiontechnologies.net.
