Connexion Technologies offers a new way to get wired

One of the nation's leading providers of optical fiber-to-the-home services, Capitol Infrastructure re-brands itself as Connexion Technologies

CARY, NC (May 12, 2006) — Capitol Infrastructure, one of the nation's leading providers of optical fiber-to-the-home technology, has changed its name to Connexion Technologies. The new name reflects the company's strategy to assume a more visible role in the delivery of advanced telecommunications services — including telephone, cable television, high-speed Internet and security— to residential communities nationwide.

“We've successfully created a reliable fiber optic infrastructure in new residential communities across the Southeast,” said Glen Lang, chief executive officer of Connexion Technologies. “As we prepare to expand our business, it's time for Connexion Technologies to establish a more visible brand that connects with consumers.”

Established in 2003, Connexion Technologies is one of the nation's largest providers of fiber-to-the-home services. It currently has contracts to provide advanced telecommunications services to homeowners in more than 60 residential communities, with plans to expand to more than 200,000 homes in the near future.

“A single piece of fiber can handle all telephone, high speed Internet and cable television needs,” Lang said. “Fiber optic wiring is more reliable and faster than

traditional wiring — and it has enough bandwidth to accommodate future technology as it comes available, such as upgrading to high definition television, IPTV, medical home monitoring, home automation and more.”

By providing fiber optic wiring directly to individual homes, consumers will enjoy more than 1,000 times the bandwidth provided by traditional coaxial cable.

The cost of all telecommunications services are typically included as part of the neighborhood’s homeowner association dues. By bundling telecommunications services in a single amenities package, residents can save up to 30% off the cost of traditional telecommunications services.

Rick Mildner, general manager and COO of Douglasville Development, LLC, recently worked with Connexion Technologies to provide fiber optic wiring in Tributary at New Manchester, a new master planned community under development outside of Atlanta in Douglasville, Georgia.

“Delivering fiber directly to each home in a new community provides tremendous advantages to developers and consumers, including higher property values,” Mildner said. A recent study conducted by an independent research firm estimates that fiber optic infrastructure increases lot values by an average of \$4,000 to \$15,000, compared to traditional copper wiring or coaxial cables.

Fiber-to-the-Home Market Poised for Rapid Growth

Consumers have become enamored in recent years with new technologies that demand more bandwidth — high definition television, online gaming, video on demand — and developers have responded with a growing number of communities that are pre-wired with fiber optic cabling.

According to a study by the Fiber to the Home Council, the number of wired homes under development has increased 100-fold in the past four years, from 35,000 homes in 2002 to more than 4 million homes this year. There has been an increase of almost 2 million homes in the past 6 months alone. As of April 2006, there were 621,000 residential homes currently connected to a fiber optic infrastructure, representing a monumental leap from the 10,000 homes that were wired in 2002.

A New Emphasis on Marketing

The introduction of Connexion Technologies’ new name is part of a new marketing campaign that seeks to educate home buyers about the advantages of fiber-to-the-home technology and position the company as a leading player in this emerging market.

Distill, a Raleigh, North Carolina-based advertising agency, is assisting Connexion Technologies with its re-branding effort. The introduction of the new name is being accompanied by a new logo, web site and marketing campaign.

About Connexion Technologies

Connexion Technologies, one of the nation's leading FTTH (Fiber to the Home) and FTTP (Fiber to the Premise) companies, creates *A Better Connection*SM for consumers. Their state-of-the-art fiber optic entertainment and communication networks are in properties nationwide. Connexion Technologies fiber amenity offering provides consumers with nearly unlimited bandwidth, and it is ready to handle emerging technology services, as they come to market. They also align with an unprecedented array of gold-star service providers, who supply consumers the best in television, voice, internet, and security services over Connexion Technologies blazing fast fiber optic networks. The company (formally known as Capitol Infrastructure), established in 2003, is based in Cary, North Carolina and has various office locations around the country.
